

Club operations and member progress. Connected.

The Ekvillo platform for club operations and member progress, Visbody devices for body measurement, and wearables for the time between workouts, which are in development. Choose the whole system or just the part you need.

Three data sources. One member profile.

Devices measure, the platform connects, people decide. Every data point arrives in one place and is seen by whoever needs it.

The device measures

A Visbody scan gives body composition, girths and posture under the same protocol.

AI connects

Ekvilo AI links measurements with membership, check-ins, plan, nutrition and habits.

People decide

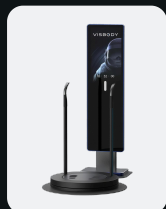

The trainer adjusts the plan, the owner sees the business, the member knows what's next.

Three ways in. You choose.

Start with what matters most to you today. Each starting point can grow into the complete system.

	DEVICE ONLY	PLATFORM ONLY	COMPLETE SYSTEM
	Visbody + WellnessHub	Ekvilo Core, Transform, Connect	Ekvilo Transform or Connect + Visbody
Visbody device and report	yes	can be added later	yes
WellnessHub AI interpretation	yes	—	optional
Memberships, payments, bookings	—	yes	yes
Trainers; plans and logging	—	trainers: all; plans: Transform, Connect	yes
Measurements in the profile	in WellnessHub	Transform, Connect · manual entry	automatic (confirmed for M60)
Member app	mobile report	by package*	by package*
Wearables (in development)	—	add-on	add-on
AI assistant; AI interpretation	—	assistant: all; interpretation: Transform, Connect	yes
Nutrition and online training	—	Transform and Connect	yes
One partner for onboarding	—	yes	yes

* For new clubs, the branded app (Connect) and the shared Ekvilo app are in development; member access is confirmed in the demo call. Automatic transfer is confirmed for the M60 (Kang); other models are checked before a proposal. Devices: purchase or lease. Photos: Visbody.

120 days to a data-based decision.

The pilot starts with a small, measurable step: one location, one measurement protocol, clear indicators at the end.

WEEK 0

Demo

Management and trainers try the device and the platform.

WEEKS 1-2

Setup and training

Device installation, Ekvilo setup, member import, trainer training.

WEEK 3

Launch

The first members start the measurement program.

DAY 120

Review

A decision on scaling based on data, not impressions.

PILOT TARGETS · AGREED TOGETHER

≥ 60%

of qualified assessments convert to a paid program

≥ 70%

of members do a follow-up scan in week 6

Renewal

target by agreement: membership renewal after the program

Next step: a demo in your club.

The intended use and classification of each Visbody model follow the manufacturer's documentation; a measurement does not replace a medical examination. BIA measurement is not intended for people with a pacemaker or other implanted electronic device, or for pregnant women. Members' body data is processed with their consent. Features marked "in development" are not part of today's offer. R60 availability is confirmed per market. Pricing and terms are set out in the proposal.
